## Table des matières

Exercise 1: Turning on/off an LED .....	2
Exercise 2: Turn on and off an LED in port 4 .....	2
1. Code.....	2
2. Result.....	2
Exercise 3: Read a Digital Value.....	3
1. Code.....	3
2. Result.....	3
Exercise 4:.....	5
1. Code.....	5
2. Result.....	5
Exercise 5: Write an Analog Value.....	6
1. Code.....	6
2. Result.....	6
Exercise 6: Buzzer .....	7
1. Code.....	7
2. Result.....	8
Exercise 7: Fun RGB – LED .....	8
1. Code.....	8
2. Result.....	8

## Exercise 1: Turning on/off an LED

## Exercise 2: Turn on and off an LED in port 4

### 1. Code

sketch\_nov27a

```
const int LED = 4;

void setup() {
  // put your setup code here, to run once:
  pinMode(LED, OUTPUT);
}

void loop() {
  // put your main code here, to run repeatedly:
  digitalWrite(LED, HIGH);
  delay(1000);
  digitalWrite(LED, LOW);
  delay(1000);
}
```

### 2. Result

## Exercise 3: Read a Digital Value

### 1. Code

```
ex_3
const int ledPin = 2;
const int buttonPin = 4;

int buttonState = 0;

void setup() {
  Serial.begin(9600);
  pinMode(ledPin, OUTPUT);
  pinMode(buttonPin, INPUT);
}

void loop() {
  buttonState = digitalRead(buttonPin);
  if (buttonState == HIGH) {
    digitalWrite(ledPin, HIGH);
  }
  else {
    digitalWrite(ledPin, LOW);
  }
}
```

### 2. Result

## Exercise 4:

### 1. Code

ex\_4

```
void setup() {  
    // put your setup code here, to run once:  
    Serial.begin(9600);  
}  
  
void loop() {  
    // put your main code here, to run repeatedly:  
    int sensorValue = analogRead(A0);  
    float voltage = sensorValue * (5.0 / 1023.0);  
    Serial.println(voltage);  
}
```

### 2. Result

## Exercise 5: Write an Analog Value

### 1. Code

```
ex_4
int ledPin = 13;
int anaPin = A0;

void setup() {
  // put your setup code here, to run once:
  Serial.begin(9600);
  pinMode(ledPin, OUTPUT);
  pinMode(anaPin, INPUT);
}

void loop() {
  // put your main code here, to run repeatedly:
  int sensorValue = analogRead(A0);
  float voltage = sensorValue * (5.0 / 1023.0);
  Serial.println(sensorValue);

  digitalWrite(ledPin, HIGH);
  delay(sensorValue);
  digitalWrite(ledPin, LOW);
  delay(sensorValue);
}
```

### 2. Result

## Exercise 6: Buzzer

### 1. Code

ex\_5

```
const int buzzer = 6; //buzzer to arduino pin 9

void setup() {

    pinMode(buzzer, OUTPUT); // Set buzzer - pin 9 as an output

}

void loop() {

    tone(9,2000,2000); // Send 1KHz sound signal...
    delay(1000);        // ...for 1 sec
    noTone(buzzer);     // Stop sound...
    delay(1000);        // ...for 1sec

}
```

## 2. Result

## Exercise 7: Fun RGB – LED

### 1. Code

```
ex_7

int redPin= 7;
int greenPin = 6;
int bluePin = 5;

void setup() {
  pinMode(redPin, OUTPUT);
  pinMode(greenPin, OUTPUT);
  pinMode(bluePin, OUTPUT);
}

void loop() {
  setColor(255, 0, 0); // Red Color
  delay(1000);
  setColor(0, 255, 0); // Green Color
  delay(1000);
  setColor(0, 0, 255); // Blue Color
  delay(1000);
  setColor(255, 255, 255); // White Color
  delay(1000);
  setColor(254, 127, 156); // Purple Color
  delay(1000);
}

void setColor(int redValue, int greenValue, int blueValue) {
  analogWrite(redPin, redValue);
  analogWrite(greenPin, greenValue);
  analogWrite(bluePin, blueValue);
}
```

### 2. Result
